PRESS INFORMATION – OUR ADJUSTABLE SYSTEMS

KessTech – Live your moment.

KessTech is the inventor of manually and electronically adjustable exhaust systems for motorcycles. Our adjustable exhaust systems enable the biker an awesome driving experience – the true and original driving fun. Full-Volume Sound because of the valve positioned at the end of the muffler, optimized performance and an absolute eye-catcher!

Totally legal!

While using our electronic sound systems you can switch between the different sound modes. In every mode including the Full-Volume Sound in the ON mode but also in the MEDIUM and OFF mode all legal requirements are met regarding performance, exhaust gas emission and sound emission. In the OFF mode you are even more quiet than the original exhaust. Therefore, you can have real fun and take care of your environment at the same time.

Technology at its best

Our customers are individualists with a sense for design and uncompromising approach to quality. Our technology enthusiasts here at KessTech are working hard for that every day. We are never satisfied with the status quo, we are permanently working on improvements and we are continuously setting new standards in technology. As the only manufacturer in the market our exhaust systems provide the same performance in every mode through all ranges, a sound mode change takes part in tenths of a second. Additionally, we are able to offer market innovations like the Power-Feature and the Active Engine Protection feature.

To ensure that everything is always right, we have our quality processes externally audited every year and are now certified according to ISO 9001:2015.

Made in Germany

KessTech adjustable exhaust systems are developed, designed and assembled in Germany. We only use high-quality stainless steel for our exhaust systems. This ensures extreme robustness and a quality appearance during the life of the exhaust system. That is why we provide a 4-year guarantee.

Driven by PASSION.

PRESS INFORMATION – OUR ADJUSTABLE SYSTEMS

Speech is silver – but listening is golden

There is a lot to be said about the KessTech exhaust sound, but for the real experience, you have to see, touch, and above all, hear it. The best way to do this is at one of our numerous distribution partners near you. Or visit us at one of the many bike shows and events that we provide for you.

The ESE (Electronic Sound Experience) system is available for motorcycle models with EURO4. All motorcycle models prior to EURO4 will be equipped with ESM (Electronic Sound Management).

ESE (Electronic Sound Experience)

ESE (Electronic Sound Experience) enables the biker an unique driving experience with Full-Volume Sound. In addition to the OFF and ON mode, ESE is equipped with a third mode MEDIUM, in which the exhaust valve takes on an intermediate position and provides the rider with an additional, third, clearly distinguishable sound option. Additionally, there are two market innovations – the Power-Feature and the Active Engine Protection:

Market innovation – Power-Feature

ESE provides you with power, if you require it! In the OFF and the MEDIUM mode, an additional burst of power is available. ESE automatically detects when a rider suddenly requires more power (for example while overtaking or in a dangerous situation that requires immediate power) and delivers the additional power without that the rider has to change the mode.

Market innovation – Active Engine Protection

When you are in OFF mode and ESE detects that the vehicle engine is getting hotter and hotter, for example at a red light, the valve opens automatically a little bit in order to reduce the exhaust gas back pressure and to let the heat go out. If the driving profile changes to a thermally more uncritical situation, you will change to OFF mode again.

ESE Software Upgrade at no cost

We are coming up with something new again and again. Therefore, all ESE systems will always receive future software upgrades at no cost! For this, the electronic has to be sent to KessTech and we make sure it is up to date. Latest upgrade: November 2018 (Harley-Davidson), March 2019 (BMW).
